As you are now aware, NIH, AHRQ, and NIOSH have eliminated the Error Correction Window.

The elimination of this error correction window does NOT affect the two-business-day [application viewing window](#) (i.e. the time an applicant has to view the electronic application image in eRA Commons upon NIH's receipt of an error-free application). PIs will still be able to view their application and reject and submit a corrected application, but this all must occur **PRIOR** to the submission deadline. Any submission or corrected application sent to NIH after the deadline is considered a late application. We strongly encourage applicants to submit in advance of the due date to take advantage of the opportunity to correct errors and warnings and to review the application in the eRA Commons before the deadline.

The image below (*and attached*) illustrates this 2-Day Viewing Window. The closer to the deadline the submission is made, the less time your PI will have to use this window and still have an ON-TIME submission. Waiting until after 4 PM the day of the deadline pushes this window into LATE submission.
